

Lebanon VA Medical Center Replace Boiler Feed Water Pumps

RLS Construction Group was selected by the Department of Veterans Affairs to remove and replace existing variable frequency drives (VFD) and three water-feed pumps at the Lebanon VA Medical Center. The work included installing new pipes, valves, gauges and appurtenances for each pump system. RLS maintained continuous operation of the facility's main boiler plant throughout the project, which was essential as the work took place during the winter months.

Location:
Lebanon, PA

Client:
**Department of
Veterans Affairs**

Cost:
\$133,733

Completion Date:
March 2012
